Differentiating our Methylsulfonylmethane (MSM) Dietary Supplements

Beauty Renew, Strength Reloaded, Superhero, A.R.S., MSM-ANTIFLAM, Asthmax, DetoxPlus

Methylsulfonylmethane is a medicinal substance that provides the body with sulphur and has an incredibly wide range of therapeutic effects. We therefore include methylsulfonylmethane in a range of products tailored to specific health needs. This page differentiates the different methylsulfonylmethane dietary supplements

manufactured by Cellular Medicines.

Beauty Renew, **Strength Reloaded** and **Superhero** combine methylsulfonylmethane with a range of vitamins and chelated minerals. These products are typically consumed daily as vitamin and mineral drinks. **Beauty Renew** focuses on nutrients needed for beauty, **Strength Reloaded** focuses on vitamins and electrolytes used in exercise, and **Superhero** provides nutrients for children. All three products contain far higher doses of vitamins and minerals than your average vitamin or electrolyte drink. **Beauty Renew** tastes pleasant in either cold or hot water, **Strength Reloaded** is diluted in a large volume of cold water, and **Superhero** is designed to be sweetened with apple juice, allowing you to control your child's intake of fruit sugar.

A.R.S. is formulated for recovery from alcohol consumption and can be taken before and/or after drinking. This product has two intended uses. In the happier case, it enables the user to perform optimally at work the day after drinking. In the more serious case, it is designed for the recovery of alcoholics who have depleted their bodies of vitamins and are suffering mood and mental effects.

MSM-ANTIFLAM, **Asthmax** and **DetoxPlus** comprise methylsulfonylmethane with a limited amount of other nutrients. These products are designed for those who want to take high amounts of methylsulfonylmethane without taking too much of other vitamins and minerals.

MSM-ANTIFLAM is our standard methylsulfonylmethane supplement. **Asthmax** is typically taken by children for respiratory support. It has half the amount of vitamin C so as to prevent a diarrhea-like effect if a child is taking large doses. In addition, it includes a blackcurrant extract for a more child-friendly taste. **DetoxPlus** includes zinc and selenium for detoxification.
